

# Contents

<b>Preface</b>	<b>xiii</b>
<b>Chapter 1. Introduction</b>	<b>1</b>
<b>Chapter 2. How Internet mail works</b>	<b>4</b>
2.1 Different types of MTA	8
2.2 Internet message standards	9
2.3 Forgery	16
2.4 Authentication and encryption	16
2.5 Routing a message	16
2.6 Checking incoming mail	17
2.7 Overview of the DNS	20
2.8 DNS records used for mail routing	23
2.9 Related DNS records	24
2.10 Common DNS errors	25
2.11 Role of the postmaster	27
<b>Chapter 3. Exim overview</b>	<b>28</b>
3.1 Exim philosophy	28
3.2 Exim's queue	29
3.3 Receiving and delivering messages	29
3.4 Exim processes	30
3.5 Coordination between processes	30
3.6 How Exim is configured	31
3.7 How Exim delivers messages	33
3.8 Processing an address	35
3.9 A simple example in detail	37
3.10 Complications while routing	44
3.11 Complications during delivery	45
3.12 Complications after delivery	46
3.13 Use of transports by routers	47
<b>Chapter 4. Exim operations overview</b>	<b>49</b>
4.1 How Exim identifies messages	49
4.2 Watching Exim at work	50
4.3 The runtime configuration file	51
4.4 Named lists	59
4.5 The default qualification domain	60
4.6 Handling frozen bounce messages	60

---

4.7	Reducing activity at high load	61
4.8	Limiting message sizes	63
4.9	Controlling IPv6 support	64
4.10	Parallel remote delivery	64
4.11	Controlling the number of delivery processes	65
4.12	Large message queues	65
4.13	Large installations	66
<b>Chapter 5. Extending the delivery configuration</b>		<b>71</b>
5.1	Multiple local domains	71
5.2	Virtual domains	74
5.3	Mailing lists	78
5.4	Using an external local delivery agent	85
5.5	Multiple user addresses	86
5.6	Mixed local/remote domains	88
5.7	Delivering to UUCP	90
5.8	Ignoring the local part in local deliveries	90
5.9	Handling case-sensitive local parts	92
5.10	Scanning accepted messages for viruses	93
5.11	Modifying message bodies	98
<b>Chapter 6. Generic options that apply to all routers</b>		<b>100</b>
6.1	Conditional running of routers	101
6.2	Changing a router's successful outcome	107
6.3	Adding data for subsequent use	110
6.4	Messages for unrouteable addresses	116
6.5	Handling DNS timeouts	116
6.6	Domains that route to the local host	117
6.7	Retry control after routing errors	120
6.8	Debugging routers	120
<b>Chapter 7. The routers</b>		<b>122</b>
7.1	The accept router	122
7.2	The dnslookup router	123
7.3	The ipliteral router	127
7.4	The manualroute router	127
7.5	The queryprogram router	134
7.6	The redirect router	137
<b>Chapter 8. Generic options that apply to all transports</b>		<b>151</b>
8.1	Environment for running transports	151
8.2	Debugging transports	153

---

8.3	Transporting only part of a message	154
8.4	Controlling message size	154
8.5	Adding and removing header lines	154
8.6	Rewriting addresses in header lines	157
8.7	Use of affixes in RCPT commands	157
8.8	Changing the return path	158
8.9	Transport filters	160
8.10	Shadow transports	163
8.11	Retry control after delivery errors	164
<b>Chapter 9. The transports</b>		<b>165</b>
9.1	The smtp transport	165
9.2	Address batching in the appendfile, lmtpl, and pipe transports	174
9.3	Options common to the appendfile and pipe transports	176
9.4	The appendfile transport	180
9.5	The pipe transport	196
9.6	The lmtpl transport	203
9.7	The autoreply transport	204
<b>Chapter 10. Message filtering</b>		<b>208</b>
10.1	Examples of Exim filter commands	209
10.2	Filtering and external delivery agents	212
10.3	Setting up a user filter	212
10.4	Setting up a system filter	214
10.5	Examples of system filters	215
10.6	Testing filter files	216
10.7	Format of Exim filters	218
10.8	Significant actions	220
10.9	Filter commands	221
10.10	The add command	221
10.11	Delivery commands	222
10.12	Mail commands	225
10.13	Logging commands	228
10.14	The testprint command	229
10.15	The finish command	229
10.16	Obeying filter commands conditionally	229
10.17	Additional features for system filters	235
<b>Chapter 11. Exim processes</b>		<b>238</b>
11.1	Message files	239
11.2	Locking message files	242
11.3	Hints files	242

---

11.4	Log files	244
11.5	User and group IDs for Exim processes	244
11.6	Process relationships	245
11.7	The daemon process	246
11.8	Reception processes	250
11.9	Queue runner processes	251
11.10	Delivery processes	253
11.11	Summary of process types	255
<b>Chapter 12. Delivery errors and retrying</b>		<b>257</b>
12.1	Retrying after errors	257
12.2	Remote delivery errors	258
12.3	Local delivery errors	261
12.4	Routing errors	261
12.5	Retry rules	262
12.6	Computing retry times	266
12.7	Using retry times	267
12.8	Retry rule examples	268
12.9	Timeout of retry data	269
12.10	Long-term failures	269
12.11	Ultimate address timeout	271
12.12	Intermittently connected hosts	271
<b>Chapter 13. Encryption, authentication, and other SMTP processing</b>		<b>276</b>
13.1	Encrypted SMTP connections	276
13.2	SMTP authentication	281
13.3	SMTP over TCP/IP	295
13.4	Local SMTP	298
13.5	Batched SMTP	299
<b>Chapter 14. Message reception</b>		<b>300</b>
14.1	Message sources	300
14.2	Message size control	301
14.3	Messages from local processes	302
14.4	Unqualified addresses from remote hosts	305
14.5	Checking a remote host	306
14.6	Limiting the rate of message arrival	308
14.7	Relay control	309
<b>Chapter 15. Access control lists</b>		<b>312</b>
15.1	The default ACL configuration	312
15.2	Specifying when ACLs are used	316

---

15.3	Use of the ACL selection options	319
15.4	ACL return codes	319
15.5	Variables set in SMTP ACLs	320
15.6	Format of an ACL	321
15.7	ACL verbs	321
15.8	ACL variables	322
15.9	Condition and modifier processing	323
15.10	The ACL modifiers	324
15.11	Arguments for the control modifier	329
15.12	The ACL conditions	332
<b>Chapter 16. Address verification</b>		<b>346</b>
16.1	Basic sender and recipient verification	346
16.2	Verification callouts	346
16.3	Suppressing details of sender verification	350
16.4	Redirection while verifying	351
16.5	Testing address verification	352
16.6	Bounce address tag validation (BATV)	352
<b>Chapter 17. Scanning incoming messages</b>		<b>357</b>
17.1	Scanning for viruses	357
17.2	Scanning with SpamAssassin	359
17.3	Scanning MIME parts	362
17.4	Scanning with regular expressions	366
17.5	The <code>local_scan()</code> function	367
<b>Chapter 18. Address and header processing</b>		<b>368</b>
18.1	Submission mode	368
18.2	Processing header lines	369
18.3	Rewriting addresses	374
<b>Chapter 19. File and database lookups</b>		<b>389</b>
19.1	Single-key lookups	390
19.2	Default values in single-key lookups	396
19.3	Partial matching in single-key lookups	396
19.4	Query-style lookups	398
19.5	Temporary errors in lookups	406
19.6	Lookup caching	406
<b>Chapter 20. String expansion</b>		<b>407</b>
20.1	Escaping literal substrings	407

---

20.2	Variable substitution	409
20.3	Header insertion	409
20.4	Operations on substrings	410
20.5	Character translation	419
20.6	Text substitution	419
20.7	Conditional expansion	419
20.8	Lookups in expansion strings	429
20.9	Inserting whole files	432
20.10	Extracting fields from substrings	432
20.11	Calling external code	435
20.12	Locking out expansion items in Exim filters	438
20.13	Testing string expansions	438
<b>Chapter 21. Domain, host, and address lists</b>		<b>440</b>
21.1	Negative items in lists	440
21.2	Putting list items in files	442
21.3	Lookup items in lists	442
21.4	Named lists	443
21.5	Domain lists	444
21.6	Host lists	447
21.7	Address lists	452
<b>Chapter 22. Miscellany</b>		<b>456</b>
22.1	Security issues	456
22.2	Using Exim as a non-queueing client	461
22.3	Use of RFC 1413 identification	462
22.4	Privileged users	464
22.5	RFC conformance	466
22.6	Timestamps	471
22.7	Checking spool space	472
22.8	Control of DNS lookups	473
22.9	Bounce message handling	474
22.10	SMTP banner strings	479
22.11	Other controllable features	479
<b>Chapter 23. Command-line interface to Exim</b>		<b>480</b>
23.1	Input mode control	481
23.2	Additional message data	484
23.3	Immediate delivery control	486
23.4	Error reporting	487
23.5	Queue runner processes	488
23.6	Configuration overrides	491

---

23.7	Watching Exim's queue	492
23.8	Message control	493
23.9	Testing options	495
23.10	Options for debugging	500
23.11	Terminating the options	502
23.12	Embedded Perl options	502
23.13	Compatibility with Sendmail	502
23.14	Calling Exim by different names	503
<b>Chapter 24. Administering Exim</b>		<b>505</b>
24.1	Log files	505
24.2	Log destination control	506
24.3	Reducing or increasing what is logged	510
24.4	Unprintable characters in log lines	516
24.5	Format of main log entries	517
24.6	Extracting information from log files	523
24.7	Watching what Exim is doing	525
24.8	The Exim monitor	528
24.9	Checking relay access	535
24.10	Maintaining alias and other files	536
24.11	Hints database maintenance	537
24.12	Mailbox maintenance	539
<b>Chapter 25. Building and installing Exim</b>		<b>541</b>
25.1	Prerequisites	541
25.2	Fetching and unpacking the source	542
25.3	Configuration for building	543
25.4	The building process	550
25.5	Installing Exim	551
25.6	Testing before turning Exim on	552
25.7	Turning Exim on	553
25.8	Installing documentation in info format	554
25.9	Upgrading to a new release	555
<b>Appendix. Summary of string expansion</b>		<b>556</b>
A.1	Expansion items	556
A.2	Expansion conditions	562
A.3	Expansion variables	566
<b>Index</b>		<b>583</b>
