
 INTUITIVE INFORMATION SECURITY
 FOR THE ENTERPRISE

SPRING 2002

TREND MICRO

InterScan™ WebProtect™

EASY TO HANDLE, INTEGRATED, INDUSTRY-LEADING VIRUS SOLUTION FOR MICROSOFT® ISA SERVERS

PROBLEM:

Microsoft's Internet Security and Acceleration (ISA) Server provides fast, secure, and manageable Internet access for many enterprises. Yet the same technology that enables quick access to Web content also exposes the enterprise network to attacks by Web-borne viruses and other malicious code. Mixed-threats such as Nimda and CodeRed, as well as hostile Java and ActiveX code, spread through HTTP traffic. Malicious code can also enter corporate networks through employees' personal Web-based email.

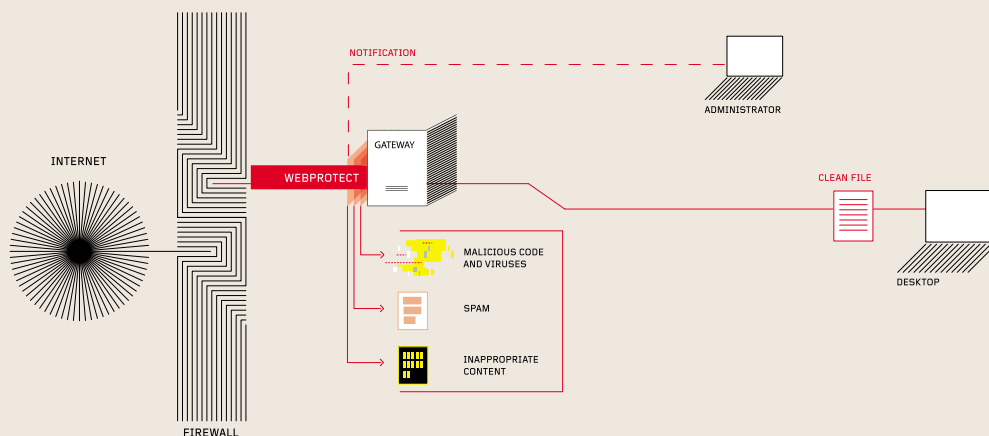

STRATEGY:

Microsoft Gold Partner Trend Micro provides Internet gateway virus protection for Microsoft ISA Server customers. Designed to work as a plug-in for ISA Server, Trend Micro InterScan WebProtect is a real-time ISAPI Web filter for viruses and malicious code, using a true Win32 multi-threaded process that scans all HTTP traffic passing through the ISA Server. This integrated solution is easy to implement, offers better performance, and requires no additional hardware purchases or changes to client settings.

- Integrated virus protection for Microsoft ISA Server users
- Tight integration with Microsoft API enables real-time HTTP scanning
- Scans for known and unknown viruses, and known malicious Java and ActiveX code
- Deploys quickly and easily without time-consuming end-user/client changes
- Saves time and cost: No need to purchase and configure additional hardware

"Trend Micro is a leading vendor, with 63% market share, in the Web server (Internet gateway) antivirus software market."

— IDC, Antivirus Software: A Segmentation of the Market, 2001

WEBPROTECT™ AT WORK

WebProtect removes and blocks infected files in real time; the message is immediately prevented from reaching end-users and the administrator is notified.

Trend Micro™ WebProtect™

INTEGRATION WITH MICROSOFT® ISA SERVER

- Trend Micro, a Microsoft Gold Partner, provides an antivirus solution at the Internet gateway for users of ISA Server, Microsoft's enterprise firewall, and Web cache server
- Designed as a plug-in to the ISA Server, InterScan WebProtect works as a Web filter to scan Web traffic in real time for viruses and malicious code
- Integrated solution is easy to install and manage, offers exceptional performance, and requires no additional hardware purchases or client setting changes

COMPREHENSIVE VIRUS PROTECTION

- Uses a true Win32 multi-threaded process that scans all HTTP traffic passing through the ISA Server
- Provides many virus scanning and security options, including scanning and auto-cleaning HTTP and FTP over HTTP virus-infected file transfers
- Protects against Internet worms, such as CodeRed and its variants
- Powerful scanning engine uses both rule-based and pattern recognition technologies to detect known and unknown viruses. It also scans for known malicious Java applets and ActiveX objects

EASE OF USE AND MANAGEMENT

- Automatic Web-based virus pattern updates can be pre-scheduled at specific intervals or accessed manually with a single mouse click
- A comprehensive activity log enables administrators to track the sources of potential security problems and respond appropriately
- Flexible configuration options allow a variety of actions in response to virus or security incidents, including alerting the administrator, isolating infected files, deleting infected files, and permitting downloads under strictly controlled conditions

THE ADVANTAGES OF TREND MICRO

- **Global Innovation:** Trend Micro has been a pioneer in the antivirus software market since 1989, developing innovative strategies to protect information as new computing standards are adopted around the world
- **Server Market Leadership:** Trend Micro is the global leader in server-based antivirus software, with a market share of more than 60% at the Internet gateway (IDC bulletin, 2001)
- **Flexible Best-of-Breed Technologies:** Trend Micro antivirus products and services are designed to integrate seamlessly with leading firewalls, intrusion detection systems, and other best-of-breed solutions for the complete enterprise strategy
- **Service and Support:** Trend Micro products and services are backed by TrendLabs, a leading antivirus research and support center that monitors potential security threats worldwide, developing the means to identify, detect, and eliminate new viruses

TrendLabs

AWARD-WINNING 24x7 SUPPORT
TrendLabs' ISO 9002-certified global headquarters and five regional centers back Trend Micro products with timely, high-quality service. A team of more than 250 engineers operates around the clock to monitor virus activity, develop information on new threats, and deliver prompt, effective solutions.

For more information about Trend Micro service and support, contact TrendLabs at <http://www.trendmicro.com/support>.

SYSTEM REQUIREMENTS

- PC with Intel® Pentium® II 300MHz CPU or 450MHz or higher Pentium III-compatible CPU
- Microsoft® Windows™ 2000 Server or Windows 2000 Advanced Server with SP1 or later*
- 256MB RAM
- 20MB of available hard-disk space
- Microsoft ISA Server 2000
- Microsoft IIS

**Note: Will not support Windows 2000 Advanced Server with more than 2GB memory*
